

IT Setup Request

Matt Grant for Congress — Missouri District 2 · accounts & access the campaign needs to own

Why: so the **committee owns its own services** (cleaner for FEC and for continuity). Please create each account below with the **committee email** and the committee card.

How to send me credentials — securely: never email/text a key in plain text. For each item, either **add me as a team member/admin**, or **send the key through a one-time link** (I'll send you a 1Password "Send" / onetimesecret link that self-destructs after one view). Tick the box as you finish each one.

Priority 1 — Start now (live site + slow approvals)

☐ 1. WinRed — donation tracking (you already have WinRed)

The donate button works, but donations aren't being recorded back into our system until the webhook is connected.

1. In WinRed, go to **Settings** → **Webhooks** and add me as a team member —
2. *or* add a webhook there using a secret value I'll send you.

Send me: WinRed team access (or confirm the webhook is added). **Cost:** none.

☐ 2. Anthropic — the AI features

Powers the AI writing/press tools on the site.

1. Sign up at console.anthropic.com (committee email).
2. Add a payment method — start with about **\$20** in credit.
3. Go to **Settings** → **API Keys** → **Create Key**.

Send me: the API key (or add me under Settings → Members). **Cost:** usage-based; a small balance lasts a long time.

☐ 3. Twilio — voter texting **DO FIRST**

Approval takes several business days — start this before the others. For sending campaign texts (GOTV, volunteer coordination).

1. Create an account at twilio.com (committee email + billing) and buy a phone number.
2. **Register for political texting (required):** complete Twilio's **A2P 10DLC** brand + campaign registration. US carriers require this for any campaign SMS, and **political** use needs the committee's legal info — FEC committee name, **EIN**, address, and website.

Send me: the **Account SID** + **Auth Token** (or add me as a user) and the phone number. **Cost:** pay-as-you-go per text + a small monthly number fee.

Social media — three layers (do them in order)

a. Account access — quick, do first

One official campaign account per platform (committee email), and **add me as admin/manager** so we can post and pull analytics. Secure the handles you want **now**, even if we don't post everywhere yet.

☐ Facebook Page	Meta Business Suite → People → add admin
☐ Instagram	link to the Facebook Page in Meta Business Suite
☐ X (Twitter)	share login via 1Password, or X delegate access
☐ YouTube	Brand Account → Settings → Managers
☐ LinkedIn	campaign Page → add admin
☐ TikTok	share login via 1Password
☐ Truth Social	share login via 1Password

b. "Sign in with..." login apps (OAuth) — Google, Facebook, LinkedIn

So staff/supporters can log in with these. Each is a **developer app** that issues a **Client ID + Client Secret**. Create it under the committee and send me both — I plug them into our login system.

- ☐ **Google** — console.cloud.google.com → new project → APIs & Services → Credentials → **OAuth client ID**.
- ☐ **Facebook** — developers.facebook.com → Create App → add **Facebook Login**.
- ☐ **LinkedIn** — developer.linkedin.com → Create App → add **Sign In with LinkedIn (OpenID Connect)**.

Send me: the **Client ID + Client Secret** for each.

c. Posting APIs — publish/schedule content from our tools

Most require **app review**, so start early. Create under the committee; send me the app credentials/tokens.

- ☐ **Meta Graph API** (Facebook Page + Instagram) — same Meta app as (b); request the posting permissions (review-gated).
- ☐ **LinkedIn** — Community Management / Posts API (access request + review).
- ☐ **X (Twitter) API** — developer.x.com. **Paid** (~\$100/mo Basic tier).
- ☐ **YouTube Data API** — enable it in the same Google Cloud project as (b).

Priority 2 — Only if we use in-store printing

☐ 4. Walgreens — same-day photo prints

Lets supporters print flyers/signs at a local Walgreens.

1. Register on the Walgreens developer / affiliate portal (committee email).

Send me: API key, affiliate ID, publisher ID. **Cost:** none to register.

Priority 3 — Free government data keys (2 minutes each)

All **free** — just an email and "request a key." Send me each key (it's usually in the confirmation email).

☐ FEC	campaign-finance data — api.data.gov/signup
☐ Congress.gov	voting record / bills — api.congress.gov/sign-up
☐ U.S. Census	district demographics — api.census.gov/data/key_signup.html
☐ Open States	state-legislature records — open.pluralpolicy.com

What I'm handling (not on your list): Clerk (staff login — the Google/Facebook/LinkedIn login apps above feed into it), AWS / email / domain (already running), and internal app secrets.

If you're short on time, this order: Twilio (start the registration!) → WinRed → Anthropic → social handles → login (OAuth) apps → posting APIs → Walgreens → free data keys.

Send each back as: "added you as a member/admin" *or* "here's the one-time link."
